

welcome to **pure audio**

More Music, Less Technology

Your enjoyment of music was the motivation for Gary Morrison and Ross Stevens to create PureAudio. Our every design decision is to serve this purpose. Purity in sound, materials, design, and execution is our goal. Our user interfaces are refined away to an unobtrusive minimum. Our materials and component choices will ensure a lifespan amounting to decades.

We invite you to enjoy our creations ...

vinyl phono preamplifier

"This product is the result of a decade long personal search for a circuit design that will do justice to the wonderful sound that vinyl is capable of. Along the way there were many attempts that fell short of the mark. Finally this design emerged, and apart from sounding just right, it was satisfyingly pure in its execution. Simplicity always seems to triumph over complexity. I hope you get as much enjoyment from it as I have done."

Gary Morrison

"This elegant, compact chassis design was created to reduce the amount of space required. Our distinctive materials and production process allows a design that matches the other products in our range and works equally well as a stand alone product."

Ross Stevens

Vinyl Phono Preamplifier front

Vinyl Phono Preamplifier back

Our Vinyl Phono Preamplifier is designed to extract the very best from your LP record collection. It is the result of a decade of experimentation as part of a search for the very best sounding phono preamplifier.

From the first few notes you hear through this product, you will know there is something quite special in what it does. From a silent background it throws up an involving, musical, 3D soundstage.

As with the entire PureAudio product range this is a dual mono design, sparing no cost in component selection. The power supply is multi-tiered and designed to create a silent environment in which the music circuitry can deliver its best.

The sensitivity, as delivered to you, is suitable for a low to medium output moving coil cartridge, and loading is user selectable from 47 Ohms to 47K Ohms. For customers who demand the ultimate we can custom build these phono preamplifiers with both gain and loading to special order.

In all PureAudio products the chassis design fully supports our musical goals. Constructed from heavy aluminium, stainless steel mesh, and supported optimally on three custom designed feet, the non-resonant, non-magnetic structure presents a beautiful, architectural look.

Specifications:

Input: RCA

Outputs: RCA

Gain at 1kHz: 62dB

Frequency Response: 20Hz to 20kHz +/- 0.2dB ref RIAA spec

Input Impedance: 47, 100, 220, 475, 1k, 47k Ohms user selectable

Input capacitance: 220pF switchable as rf rejection filter

Output Impedance: 100 Ohms

Distortion: <0.01% in normal operation

Hum & Noise: >80dB A weighted with ref to 5mV input

Power Consumption: 15 Watts

Dimensions: 410mm deep, 210mm wide, 115mm high

Weight: 7kg

If you have any questions or comments either ask your PureAudio retailer, or contact us via our website,
